Information Disclosure Statement

The information disclosure statements filed July 22, 2003 and January 30, 2004 have been considered and have been made of record.

Improper Multiple Dependent Claims

Claims 28-38, 56-57,59-60 and 80 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim should refer to other claims in the alternative only and/or cannot depend from any other multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims 28-38,56-57, 59-60 and 89 have not been further treated on the merits.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3,5-22 and 55-76 are rejected under 35 U.S.C. 102(b) as being anticipated by Suzuki et al (USP 6,399,669).

Suzuki et al (USP 6,399,669) discloses a porous material made of a dry gel of a polyimide resin having an apparent density of 800 kg/m³ or less and a mean pore size of 1 µm or less, the porous material exhibits high heat resistance and is low in density and mean pore size; said porous polyimide material is used to produce not only a heat insulator with a low thermal conductivity and high heat insulation but also an insulating material having a low dielectric constant and exhibiting excellent dielectric characteristic

Application/Control Number: 10/625,501

Art Unit: 1711

at high frequencies, it can also provide a semiconductor circuit including the insulating material. See abstract; col. 2, lines 5-67; col. 3, lines 3-7, 10-20, 25-32, 33-40, 41-68; col. 4, lines 29, 30-54, 58-67; col. 5, lines 1-21, 22-67; col. 6, lines 1-67; col. 7, lines 1-26, 28-31, 32-67; col. 8, lines 1-67; cols. 9-1; Examples -6 and claims 1-6.

At col. 14, the patentee teaches in example 5, the polyimide resin sheet was immersed in a methanol/water mixed solvent and heated at 50°C for 1 day which gave a polyimide swollen body. The swollen body was further heat treated for 7 days to make a gel. The polyimide wet gel thus obtained was subjected to supercritical drying using carbon dioxide which gave a polyimide dry gel. The dry gel thus produced had an apparent density of about 500 kg/m³, a mean pore size of about 700nm and a BET specific surface area pf about 450 m²/g. Next, the polyimide dry gel was carbonized at 800°C in a nitrogen atmosphere to produce a porous carbon material.

The patentee teaches at col. 6, lines 50 – col. 7, lines 31, that the reactants the dianhydrides and diamines used to prepare the polyamic acid and the resulting polyimide are not limited to the examples disclosed and any compounds may be used in if their combination can form a resin having a polyimide structure. See especially col. 7, lines 28-31.

Prior Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. These references are cited to show the state of the art of polyamic acids having three-dimensional network molecular structure, polyimide/metal laminate, polyamide membranes and polyimide film: Inoue, Barringer, Sawasaki, Nishinaka, Makino and Nagata.

Application/Control Number: 10/625,501

Art Unit: 1711

Claims 4,23-27,39-54,77-79, 81-111 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Patricia Hightower whose telephone number is (571) 272-1073. The examiner can normally be reached on M-F from 9:30 A.M. - 6:00 P.M.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James Seidleck can be reached on (571) 272-1078. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
